

Project informations - Expected results of the project

As a result of the project, 3 teaching programmes will be developed, along with educational materials for teachers and students, which will be published in the paper and electronic form (CD, website). All of the project's products will be made in English and translated into the languages of all partners. Also, strategies and action programmes will be elaborated within the project, ensuring high quality of all the project's results and the continuation of undertaken actions. The Dissemination Strategy defines the structure (Steering Committee), the range, and the division of roles of individual partners in using the project's results. The Partnership Strategy – embracing local partnership as well as European one – will define the principles of interregional and international exchange of teaching programmes and trainings, trainers and advisors, and will ensure the lasting effect of the project. The project's products will be disseminated in accordance with the developed Dissemination Strategy also among other European Union's countries being interested in them, as well as into pre-accession countries. The recipients of the project's results will be educational and training institutions, whereas the project's impact will be used by pro-innovation institutions (such as technology transfer centres, enterprise incubators, business consulting centres, regional networks supporting entrepreneurship), companies, governmental and local administration units offering employment to newly-trained specialists – economic animators specializing in technological development, regional development and entrepreneurship development.
